

Analysis of Cuisines and Restaurants

<https://asmitav.github.io/>

Team: Asmita, Deena

Overview of data

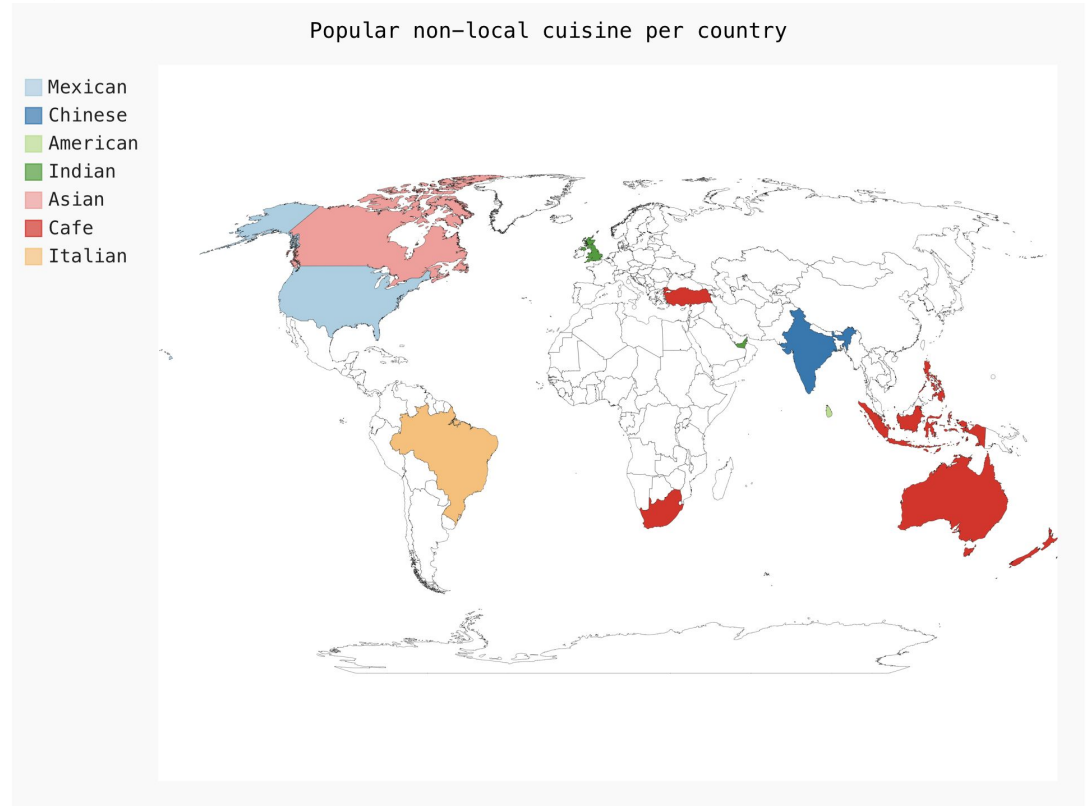

- Analysis uses Zomato data that contains restaurant information for 15 countries.
- Restaurant information includes:
 - Location
 - Ratings - Overall and Price
 - Cuisines available
 - Average cost for two
 - Additional services offered like table booking, delivery etc.

Visualization Objectives

Popular Non-local Cuisine

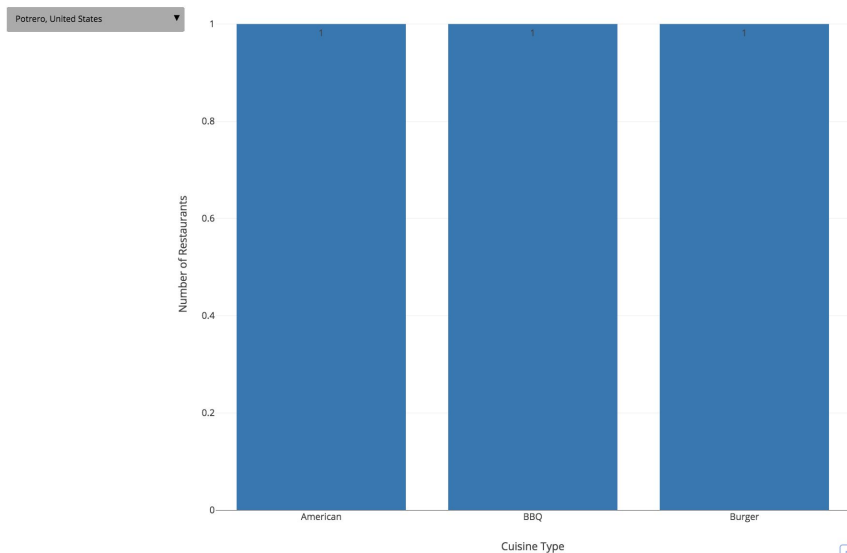

Give insight into how cuisines have globalized by looking at popular non-local cuisine in different countries.

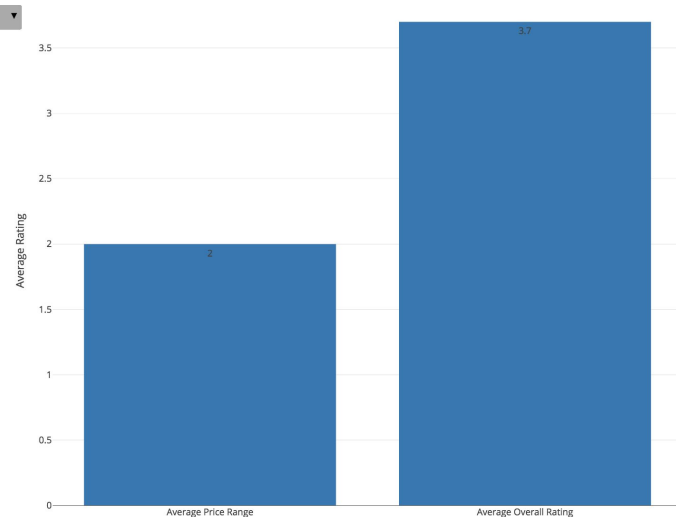

Restaurant summary for Cities

Enable users to search for a city and get information regarding restaurants in that city. Great for food lovers cum travellers!

Cuisines Summaries for City: Potrero, United States

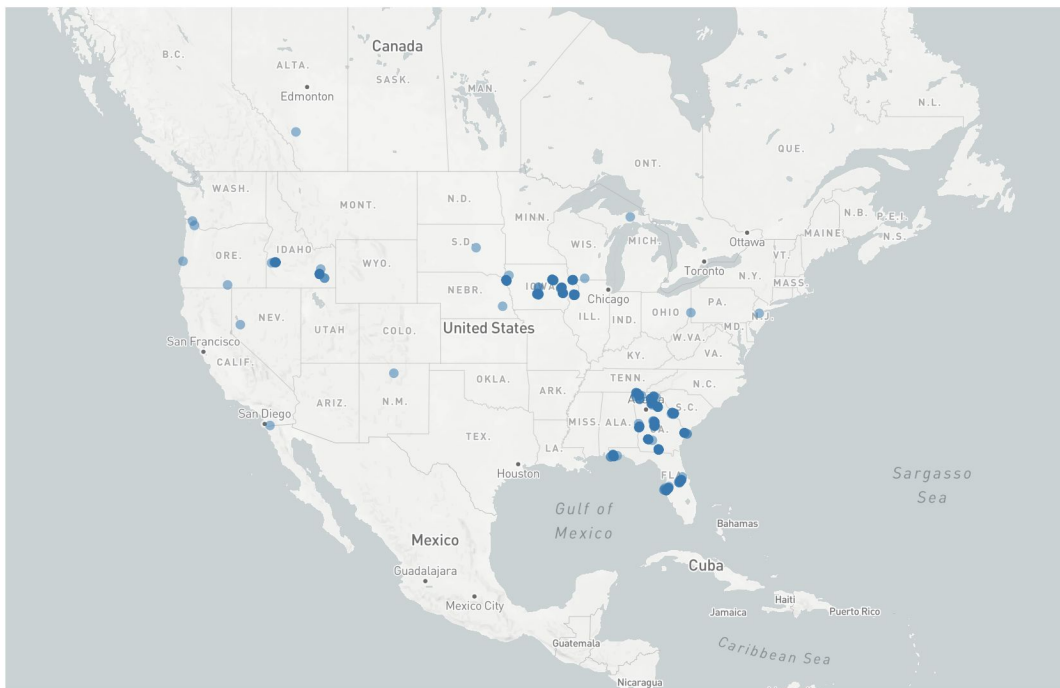

Restaurant Summaries for City: Phillip Island, Australia

Restaurant ratings in US

Look at restaurant data
available on Zomato for US.

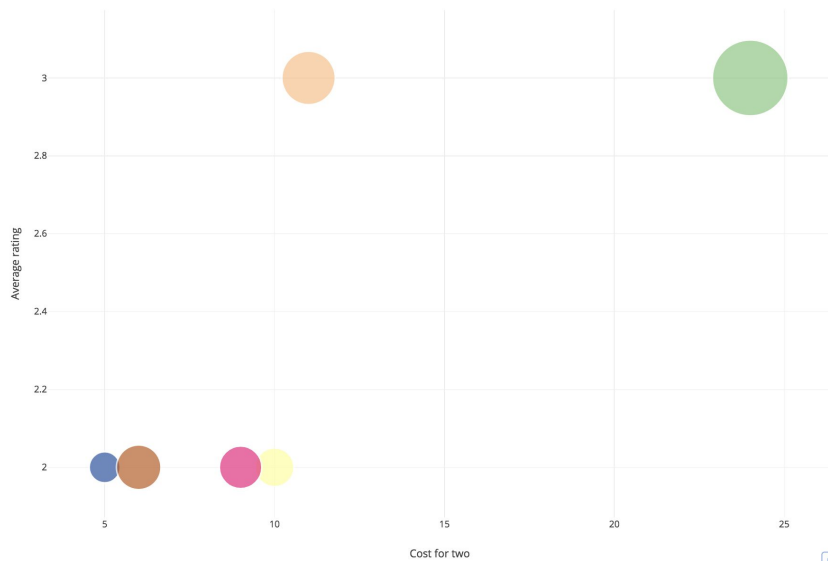

Restaurant info in US

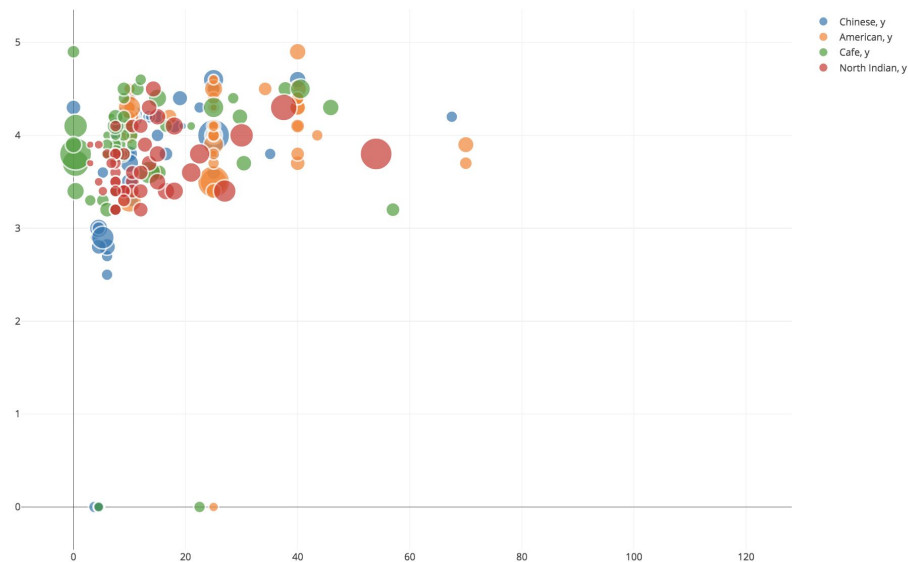

Cost vs Rating

Understand how cost of a meal influence average restaurant ratings.

Variation in average rating with cost for two (bubble size = # votes, color = cuisine)

Individual restaurant cost vs rating for different cuisines
